DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-7, 10 and 11, drawn to a non-human animal unresponsive to lipoprotein or lipopeptide that are bacterial cell components.

Group II, claim(s) 12-34, drawn to a screening method of a suppressor or a promoter of responsiveness to bacterial cell component by using the non-human animal unresponsive to bacterial cell components.

Group III, claims 35-37, drawn to a suppressor or a promoter of responsiveness to bacterial cell components.

Group IV, claims 38-42, drawn to an assessing method of a subject material relating to its bioactivity.

Group V, claims 43-49, drawn to a method of detecting bacterial cell components.

Group VI, claims 8 and 50, drawn to a TLR2 knockout animal.

Group VII, claims 9 and 51, drawn to a MyD88 knockout animal.

PCT Rule 13.2 requires that unity of invention exists only when the shared same or corresponding technical feature is a contribution over the prior art. The inventions listed as Groups I-VI do not relate to a single general inventive concept because they lack the same or corresponding special technical feature. The "special technical feature" of Group I is a non-human animal unresponsive to bacterial cell component which can be any immuno-deficient

non-human animal, for example, a SCID mouse. As such, the invention lack novelty or inventive step, and does not make a contribution over the prior art.

The special technical feature of Group II is the non-human animal unresponsive to bacterial cell component which does not make a contribution over prior art as discussed above. The special technical feature of Group III is a suppressor or a promoter of responsiveness to bacterial component which is not shared by the rest of the groups. The special technical feature of Group IV and V is also the non-human animal unresponsive to bacterial cell component which does not make a contribution over prior art as discussed above. The special technical feature of Group VI and VII is a TLR2 or a MyD88 knockout mouse respectively, which is not shared by the rest of the groups. Therefore, the unity of the invention is lacking.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
